

Security Auditing Audit Collection SYSLOG Gateway™

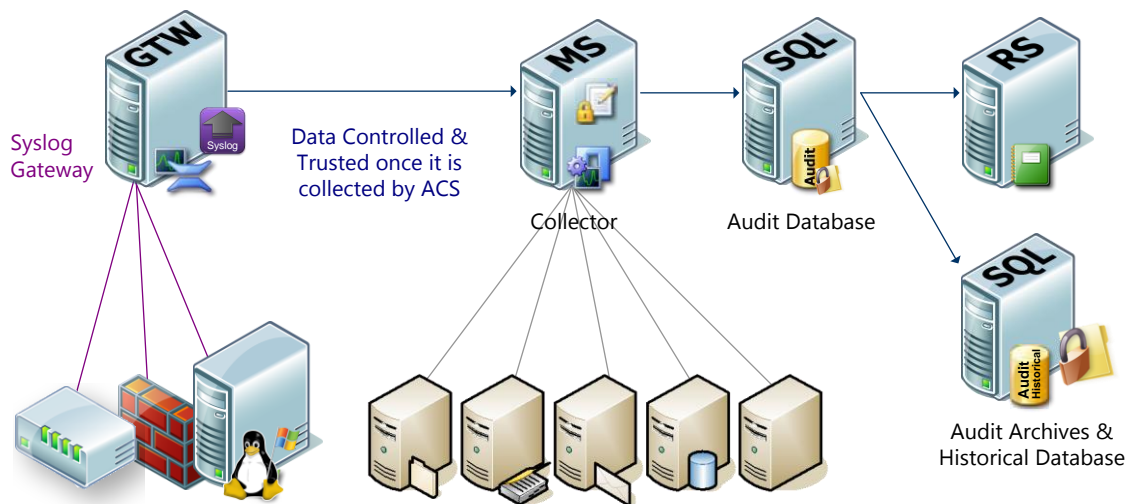

Extend the Security Auditing solutions with the Audit Collection SYSLOG Gateway which provides centralized security event collection, alerting, reporting and storage for syslog enabled devices via the Audit Collection Service. After installing the gateway and enabling syslog event forwarding on endpoints, your syslog events will be processed into a Windows Security Event Log for ACS to consume.

EVENT COLLECTION PROCESS

- Step 1: Enable SYSLOG event forwarding to Gateway Server
- Step 2: Gateway translates into local Windows Security Event
- Step 3: ACS collects event on Gateway Server
- Step 4: Alert, Archive & Audit

Audit Collection Syslog Gateway™ Architecture Overview

Agent-less Solution
Licensed per Gateway Server

"Now we're able to run reports and analytics to determine if there are any violations that need investigation or remediation before the auditors even arrive. That's something we simply couldn't do before."
