

# Security Management packs for System Center Operations Manager

## Secure Vantage Security Management

### WINDOWS SECURITY

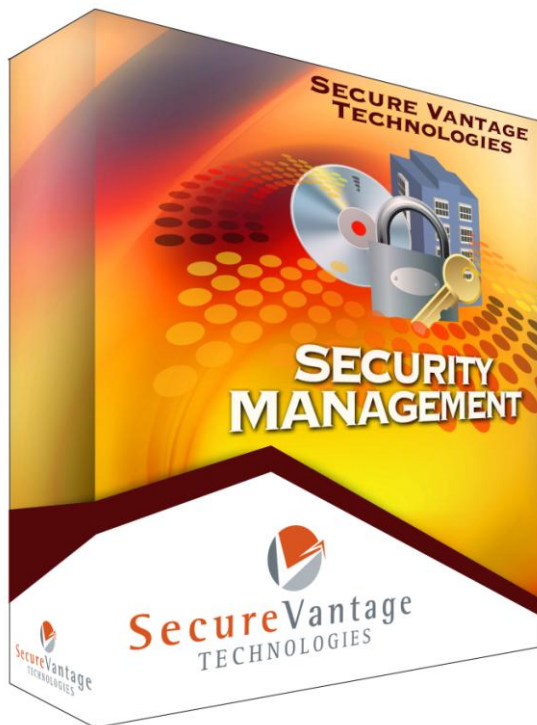

Get rule-specific auditing of predefined security events and controls within your organization and data center.

### GROUP POLICY

Audit security configurations and monitor changes to Group Policy settings, configurations and applied policies.

### CUSTOMER PROVEN

“Using Microsoft System Center Operations Manager 2007 and the Secure Vantage Compliance Security Suite to streamline our processes and get better efficiencies, we reduced the workload on other engineering teams by 5,700 hours.” Director Enterprise IT Management, Fortune 1000

- Account Management
- Auditing Integrity
- Authentication
- Directory Services
- Group Policy
- Object Access
- Policy Changes
- Privilege Use
- Windows Firewall

Move to the next generation of enterprise security management with the Secure Vantage Compliance Security Suite for Microsoft System Center.

The Secure Vantage Security Management solution delivers unprecedented real-time alerting and health monitoring of all Windows security events & group policy settings across your entire Windows enterprise.

The Security Management solution leverages your existing System Center Operations Manager environment and provides the foundation for implementing Windows security alerting, controls and operational processes within your organization.

Within minutes of installing our solution, your environment will transform into a security management system with immediate visibility into existing security violations, expert knowledge guidance for managing those violations, associated operational views and reporting. Optimize your existing investment in System Center and discover how easy Security Management can be for Windows systems.

### SOLUTION FEATURES

- Over 400 Alert Rules
- Alert Monitoring Templates
- Expert Knowledge Content
- Group Policy Change Tracking
- Pre-Filtered Operations Views
- Response & Remediation Tasks
- SMB & Group Policy Security Reporting

ISV/Software Solutions

# Security Management packs for System Center Operations Manager

## ALERTING EXAMPLES

- Admin Group Changes
- Audit Log Cleared
- Audit Policy Changes
- Domain Policy Changes
- Domain Trust Changes
- Group Member Added to X
- IPsec Policy Changes
- Kerberos Policy Changes
- Multiple Logon Failures
- Password Policy Changes
- Privilege Use Failures
- Scheduled Task Created
- Security Privilege Failures
- Service Installation Failure
- Setting Not Equal to X
- SysVol Changes
- User Account Disabled
- User Account Locked
- User Account Unlocked
- User Rights Assigned
- User Rights Removed

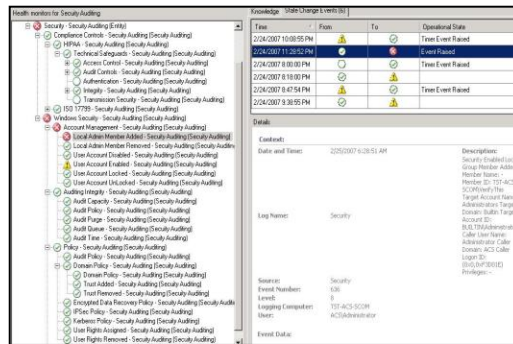

## KNOWLEDGE CONTENT

Knowledge content is compiled from industry experts and Microsoft resources to provide hybrid of best practice guidance.

- Windows Security Expert, Randy Franklin Smith
- Microsoft Security Guides
- Published Regulations & Standards

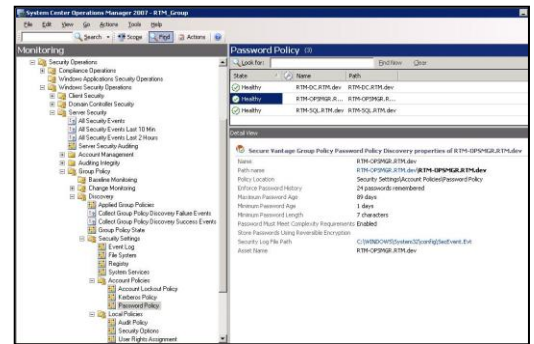

## WINDOWS SECURITY AUDITOR

The Windows Security Auditor (WSA) provides comprehensive alerting and operational services for auditing Windows Server security events. With pre-defined alerting, collection rules, operational views, remediation tasks and reporting, this solution complements any Windows environment. Implement Windows security event auditing 'best practices' out-of-box and leverage the extensive monitoring template library to customize the solution for your specific needs.

## GROUP POLICY AUDITOR

The Group Policy Auditor (GPA) enables detailed GPO setting discovery and auditing that provides reporting metrics on policy configuration, baseline exceptions, compliance alerting and historical change tracking of Windows Server security policies. This solution improves visibility into potential configuration issues and audit assessments by extending your auditing trail of GPOs to identify both Users making changes and the security settings being changed.

## Solution Services

Secure Vantage and our channel partners provide a variety of consulting and engineering services to help ensure your project's success, including:

- Architecture and Planning
- Custom Development
- Implementation & Setup
- Solution Optimization
- Solution Training

## Solution Requirements

- Windows 2003 SP2 or Windows 2008
- Operations Manager 2007 SP1 or R2
- System Center Essentials Supported

"Over the past three years, Secure Vantage solutions have helped us enforce security controls and provide reliable audit reports for our Windows Servers with greater ease and fewer manual resources."

– Fortune 1000 Financial Customer

## Security Auditing & Compliance

Looking for more detailed reporting or auditing capabilities? The Security Management solution can easily be upgraded to provide more comprehensive Windows security event collection, advanced reporting services and regulatory compliance knowledge libraries.

**Security Auditing:** Archiving & Reporting solutions for the Audit Collection Service (ACS)

**Security Compliance:** Regulations & Standards knowledge modules for Operations Manager & ACS
